

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-24 (Canceled)

25. (Currently Amended) A flexible polyurethane foam obtained by reaction between a polyesterpolyol and a diisocyanate, the flexible polyurethane foam having a density, determined according to ASTM standard D3574(A), of less than 0.3 g/cm<sup>3</sup>, a hardness, measured according to NBR standard 14455 (Ascher C), of greater than or equal to 45 and a compression set, determined according to ASTM standard D 395 (B), of less than or equal to 12%.

26. (Currently Amended) The foam according to Claim 25, wherein the density is between 0.1 g/cm<sup>3</sup> and 0.25 g/cm<sup>3</sup>, ~~optionally between 0.15 g/cm<sup>3</sup> and 0.23 g/cm<sup>3</sup>.~~

27. (Previously Presented) The foam according to Claim 25, having a tear strength, measured according to ASTM standard D 3574 (F), of greater than or equal to 2.5 kg/cm.

28. (Previously Presented) The foam according to Claim 25, having a tensile breaking stress, measured according to ASTM standard D 412, of greater than or equal to 18 kg/cm<sup>2</sup>.

29. (Previously Presented) The foam according to Claim 25, having an elongation at break, measured according to ASTM standard D 412 (C), of greater than or equal to 250%.

30. (Previously Presented) The foam according to Claim 25, having a moulding shrinkage, determined according to SATRA standard TM 70, of less than or equal to 1.0%.

31. (Previously Presented) The foam according to Claim 25, further containing a dispersed mineral particulate filler in a weight concentration of between 0.8% and 8% relative to the total weight of the foam.

32. (Previously Presented) The foam according to Claim 31, wherein the mineral filler particles have a mean size of less than 60  $\mu\text{m}$ .

33. (Currently Amended) The foam according to Claim 32, wherein the particles have a mean size of less than 20  $\mu\text{m}$ , ~~optionally less than 10  $\mu\text{m}$ .~~

34. (Previously Presented) The foam according to Claim 31, wherein the mineral filler is aluminosilicate, silica, titanium oxide, talc, calcium carbonate, mica or kaolin.

35. (Previously Presented) The foam according to Claim 34, wherein the mineral filler is a precipitation silica.

36. (Previously Presented) The foam according to Claim 25, wherein the polyesterpolyol is obtained by reaction between a diol and a diacid or a mixture of diacids comprising at least adipic acid and at least one diacid having 5 carbon atoms or less.

37. (Previously Presented) The foam according to Claim 36, wherein the diacid having less than 5 carbon atoms is glutaric acid.

38. (Previously Presented) A reactive extrusion process for manufacturing polyurethane foam as defined in Claim 31, comprising the steps of: feeding in a diisocyanate compound, a composition formed by a suspension of mineral fillers in a polyesterdiol, a catalyst and a foam-forming agent, the said foam-forming agent being present in an amount required to obtain the desired density.

39. (Previously Presented) The process according to Claim 38, wherein the composition formed by a suspension of mineral fillers in a polyesterdiol is obtained by reacting a diol compound with at least one diacid in an esterification step, followed by a polycondensation until the desired degree of polymerization is obtained, the diacid being adipic acid, and wherein the mineral filler is dispersed in or fed into the reaction medium either before the esterification step or at the start of the polymerization step.

40. (Previously Presented) The process according to Claim 39, wherein the diacid is a mixture of adipic acid and of diacids having 5 carbon atoms or less.

41. (Previously Presented) The process according to Claim 40, wherein the diacid is a mixture of adipic acid, glutaric acid and succinic acid.

42. (Previously Presented) The process according to Claim 39, wherein the diacid is a mixture of adipic acid and AGS.

43. (Previously Presented) The process according to Claim 42, wherein the adipic acid is present in the acid mixture in a concentration of between 2% and 20% by weight.

44. (Previously Presented) The process according to Claim 39, wherein the mineral filler is added to the esterification medium as a mixture with at least some of the diacids.

45. (Currently Amended) A shoe midsole ~~obtained by moulding~~ comprising a polyurethane foam as defined in Claim 31.

46. (Currently Amended) The A shoe comprising at least a portion of the sole as defined in Claim 45.

47. (New) The foam according to Claim 25, wherein the density is between  $0.15 \text{ g/cm}^3$  and  $0.23 \text{ g/cm}^3$ .

48. (New) The foam according to Claim 33, wherein the particles have a mean size of less than  $10 \text{ }\mu\text{m}$ .
